PAP Algebra 2 Arithmetic Sequences

Sequence—an ordered set of numbers

➤ Each number is a *term* of the sequence.

> May be finite or infinite.

Arithmetic sequence—a pattern is formed by adding or subtracting the same value, called the <u>common difference</u>) to create

the next term

arithmetic sequences

sequences

Determine whether each sequence could be arithmetic. If so, find the common difference and the next term.

Find a term in a sequence:

$$a_n = a_1 + (n-1)d$$

a_n: nth term

a₁: 1st term

n: number of terms

d: common difference

```
Find the requested term of each arithmetic sequence.

6, 12, 18, 24, ... Find the 10<sup>th</sup> term.

Q_{10} = Q_{1} + (10-1)(Q_{10}) \qquad Q_{10} = Q_{10}

= Q_{1} + Q_{1}(Q_{10}) \qquad Q_{10} = Q_{10}

= Q_{1} + Q_{1} \qquad Q_{10} = Q_{10}

= Q_{1} + Q_{1} \qquad Q_{10} = Q_{10}

= Q_{1} + Q_{10} \qquad Q_{10} \qquad Q_{10}

= Q_{1} + Q_{10} \qquad Q
```

```
Find the missing terms in each arithmetic sequence.

5, 18, 31, 44, 57, 70

70 = 5 + (6 - 1)d

10 = 5 + 5d

65 = 5d

13 = d

2.5, 1.8, 1.1, 0.4

0.4 = 2.5 + (4 - 1)d

0.4 = 3.5 + 3d

-3.1 = 3d

-0.7 = d

In an arithmetic sequence beginning with 8 and ending with 216, how many integers are divisible by 4?

a_1 = 8 a_n = 216 d = 4 n = 216 = 8 + (n-1)(4)

a_1 = 8 + (n-1)(4)

a_1 = 8 + (n-1)(4)

a_1 = 4 + 4

a_1 = 4 + 4

a_1 = 4 + 4

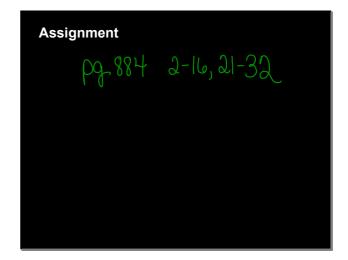

a_1 = 4 + 4
