

Parallel Lines & Transversals

Classify the angle pair relationship.

- ① $\angle C$ & $\angle F$ *Alt Int.*
- ② $\angle B$ & $\angle H$ *Consec. Ext.*
- ③ $\angle A$ & $\angle D$ *Vertical*
- ④ $\angle G$ & $\angle C$ *Corresponding*
- ⑤ $\angle H$ & $\angle A$ *Alt Ext*
- ⑥ $\angle E$ & $\angle F$ *Linear Pair*
- ⑦ $\angle F$ & $\angle D$ *Consec. Int*
- ⑧ $\angle D$ & $\angle G$ *None*

title

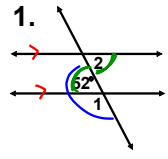

relationships

PARALLEL lines cut by a transversal

<p style="color: red; font-weight: bold;">Congruent</p> <p>corresponding angles</p> <p>alternate exterior angles</p> <p>alternate interior angles</p> <p style="color: blue; font-style: italic;">Vertical</p>	<p style="color: red; font-weight: bold;">Supplementary</p> <p>consecutive exterior angles</p> <p>consecutive interior angles</p> <p>none/no name relationship</p> <p style="font-size: small;">(opposite sides of the transversal, but one angle is between the parallel lines while the other is outside the parallel lines)</p> <p style="color: blue; font-style: italic;">Linear pair</p>
----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Find the $m\angle 1$ and $m\angle 2$.

1.

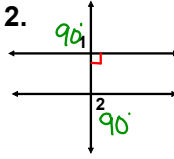

$m\angle 1 + 52^\circ = 180^\circ$

$m\angle 1 = 128^\circ$

$m\angle 2 = 52^\circ$

alt. int

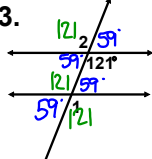

2.

90°

90°

3.

$121, 59$

$59, 121$

$121, 59$

$59, 121$

$180 - 121 = 59$

$m\angle 1 = 121^\circ$

$m\angle 2 = 121^\circ$

congruent or supplementary

Sep 17-9:18 AM

Find the values of the variables.

$4w = 116$ $x + 116 = 180$
 $w = 29$ $x = 64$

$3z + 5 = 92$
 $3z = 87$
 $z = 29$
 $8y + 92 = 180$
 $8y = 88$
 $y = 11$

examples

Is it possible to prove that lines m and n are parallel?

yes
 Corresponding
 \angle s are \cong

NO
 $108 + 82 = 190$
 Consec Ext. are
 supposed to be
 180

YES
 They are all
 Rt \angle s

examples

Conclusion

- Which angles are congruent?
Vert, corresponding, alt int, alt Ext.
- Which angles are supplementary?
Linear pair, Consec Ext, Consec. Int, ^{Sometimes} None
- Other Questions?

Assignment

**Parallel lines and
Transversals Wkst 1**
